

JAYDEEP NAI

Senior MERN Stack Developer

Ahmedabad, Gujarat, India | +91 93137 75782 | jaydeepnai.imscit20@gmail.com
linkedin.com/in/jaydeep-nai-8694a8211 | github.com/jaydeepnai

PROFESSIONAL SUMMARY

- Results-driven MERN Stack Developer with 4+ years of experience delivering scalable enterprise and fintech applications.
- Skilled across React.js/Next.js frontends, Node.js/Express.js backends, relational and NoSQL data layers, and performance-focused backend design including Redis caching, Socket.IO real-time features.
- Repo owner and feature owner for 4 core repositories within Sustain microservices-based enterprise application at Upforce Tech with hands-on experience across AI-powered SaaS, fintech, and recruitment-tech platforms.
- Lead delivery of 3 projects, train and mentor 7 interns, and consistently deliver on time by owning requirement gathering, effort estimation, and sprint planning.
- Rewrite and modernize legacy codebases and lead backend data migrations, communicating closely across frontend, backend, QA, product, and design teams.
- Comfortable owning a module end-to-end from requirement analysis and architecture through development, testing, code review, and production deployment, following Agile/Scrum practices.

KEY SKILLS

- **Frontend:** React.js, Next.js, TypeScript, JavaScript (ES6+), Redux, Context API, React Query, React Hook Form, JSX, HTML5, CSS3, Axios, Reusable Components, HOCs & Custom Hooks, Data Visualization (Charts & Graphs), Internationalisation (i18n), TensorFlow.js, Responsive Design, Cross-Browser Compatibility
- **Backend:** Node.js, Express.js, RESTful APIs, GraphQL, Webhooks, Third-Party Integrations, Payment Gateways, Microservices Architecture, OOPs, Design Patterns, Data Structures & Algorithms, JWT Authentication, Clerk, Auth0, Role-Based Access Control (RBAC), Nodemailer, Resend, Multer (File Uploads)
- **Database & ORM:** PostgreSQL, MySQL, MongoDB, Microsoft SQL Server, Prisma, TypeORM, Drizzle ORM, Sharding, Replication, Firebase, CouchDB
- **Caching & Real-Time:** Redis (caching & performance optimization), Socket.IO (live notifications, chat, collaborative features)
- **Cloud, Security & DevOps:** Microsoft Azure, Docker, CI/CD (GitHub Actions), Next.js Proxy/Middleware (API Security)
- **Testing & Tools:** Playwright, Cypress, React Testing Library, Git, GitHub, GitLab, GitBash, Postman, ESLint, Prettier, Agile/Scrum Methodology, Debugging, Code Reviews
- **UI Libraries:** Bootstrap, Material-UI, Ant Design, ShadCN UI, jQuery, Ajax, Tailwind CSS
- **Leadership & Delivery:** Team Management, Mentoring & Training (Interns), Requirement Gathering, Effort Estimation, Sprint & Deadline Delivery, Cross-Team Communication
- **Additional:** Full-Stack Development, WaveSurfer.js (Audio Visualization), Custom Fields, Claude / AI Coding Tools

PROFESSIONAL EXPERIENCE

MERN Stack Developer | Upforce Tech | 1st June 2024 - Present

- Own 4 core repositories as repo owner and feature owner within Sustain (enterprise application), leading end-to-end architecture, development, and production deployment across microservices with RESTful/GraphQL API design.
- Lead delivery of 3 projects with a team of 4 developers, mentor and train 7 interns, and own requirement gathering, effort estimation, and sprint planning to consistently deliver features on deadline.
- Rewrite and modernize legacy parts of the codebase and lead backend data migrations, while communicating closely across frontend, backend, QA, product, and design teams to align on scope and timelines.
- Architect frontend components (React.js, Next.js, TypeScript) and backend services (Node.js, MongoDB/SQL) for scalability and performance, including Redis caching, database sharding, and replication for horizontal scale.
- Manage server-state data fetching and caching with React Query and build validated, reusable forms with React Hook Form, reducing boilerplate and improving form performance across modules.
- Build reusable components, HOCs, and custom hooks with Tailwind CSS and ShadCN UI to reduce duplication, and implement data visualization graphs/charts, custom fields, and internationalisation (i18n) for enterprise clients.
- Implement authentication and access control using JWT, Clerk, Auth0, and role-based access control (RBAC), and configure Next.js proxy/middleware layers to secure API routes.
- Integrate webhooks, third-party services, and payment gateways for automated business workflows, and handle emails (Nodemailer/Resend) and file uploads (Multer).
- Design and implement real-time features (Socket.IO) for live updates and notifications across enterprise workflows, and evaluate event-driven patterns (RabbitMQ/Kafka) for decoupled service communication.
- Build automated E2E test suites using Playwright and Cypress and unit/component tests with React Testing Library, conduct code

reviews, and enforce code quality with ESLint and Prettier.

- Containerize services with Docker, deploy and manage workloads on Microsoft Azure, and maintain CI/CD pipelines (GitHub Actions) for automated build, test, and release workflows.
- Explore TensorFlow.js for in-browser ML features and use Claude/AI coding tools to accelerate development and code review.
- Contribute as MERN developer on 3 additional projects — ReachFi (fintech), QuikCV (AI resume builder), and HireTrack (recruitment tech) — covering real-time features, relational data modeling, and API integrations.

React JS Developer | *Fortune Infosys* | 1st Dec 2021 - 17th Nov 2023

- Spearheaded React-based projects, strengthening front-end architecture, component design, and state management using Redux and Context API.
- Built and consumed RESTful APIs with Node.js/Express.js and MongoDB, handling data modeling, CRUD operations, and integration with frontend components.
- Enhanced UI performance through code optimization and component reusability, and collaborated with design/backend teams to deliver responsive, production-ready features.
- Worked across the full-stack development lifecycle — from wireframe translation to deployment — ensuring cross-browser compatibility and responsive design principles, within Agile/Scrum sprints using Git for version control.
- Wrote unit and integration tests, participated in code reviews, and debugged production issues to maintain application stability and code quality.

KEY PROJECTS

QuikCV : AI-Powered Resume Builder (SaaS)

- Platform that helps users create, optimize, and score resumes using AI-driven content generation and ATS compatibility analysis.
- Contributed to the resume editor interface using React.js and integrated AI-driven content generation and ATS scoring features.

ReachFi : Fintech Digital Payments & Wallet App

- Fintech application enables users to manage transactions, track spending, and plan finances through data-driven insights, backed by relational data models and caching for performance.
- Contributed to core wallet features including transaction management, real-time balance tracking, predictive spending analytics, and financial planning modules.

HireTrack : Recruitment-Tech Platform

- Platform streamlining the interview process — scheduling, panel coordination, and structured feedback capture in real time using Socket.IO-based live updates.
- Contributed to building the interview scheduling module and structured feedback capture system.

Sustain : Enterprise Microservices Platform

- Large-scale enterprise application built on a microservices architecture, handling complex business workflows across multiple interconnected modules with Redis-backed caching for performance.
- Own end-to-end development and delivery of 4 core microservices, from requirement analysis to production deployment, containerized with Docker and shipped through a CI/CD pipeline.

CORE COMPETENCIES

- Scalable Application Design: Building high-performing, maintainable web applications using proven design patterns and clean architecture principles.
- Database & ORM: Strong grasp of relational databases (PostgreSQL/MySQL) and SQL, with hands-on ORM experience (Prisma, TypeORM) for efficient, type-safe data access.
- Performance Optimization: Identifying and resolving bottlenecks across backend services, databases, and caching layers using Redis and query optimization techniques.
- Real-Time & Event-Driven Systems: Implementing live features with Socket.IO and understanding event-driven architecture patterns using RabbitMQ/Kafka.
- DevOps & Quality: Docker containerization, CI/CD pipelines, ESLint/Prettier code standards, and Agile/Scrum delivery workflows.
- Leadership & Delivery: Repo/feature ownership, leading teams and interns, requirement gathering, effort estimation, and on-time delivery across projects.
- Data Structures, Algorithms & Design Patterns: Applying strong DSA fundamentals and design pattern knowledge to write efficient, well-structured code.

EDUCATION

B.Sc. Computer Science & Technology — GLS University | 2020 – 2023
